PROJECT SUN STREAK (U)WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

CRV Session Procedures Report (S/NF/SK)

Control Number	: 8704
Date of Session	: 18Mar87
Date of Report	: 18Mar87
Source Identifier	: 003

1. (S/NF/SK) Tasking: Received and reviewed this date. Tasking data sheet attached. No other info provided, other than to collect indicators.

2. (S/NF/SK) Session: Source seemed to acquire target immediately, however it appears that he shifted attention quickly from the open area to the associated structures (6 km SW). Monitor moved source back later in the session. Monitor introduced the words "activities" and "test" into S4. Source was continuously instructed to remain in the S2 column in order to keep analysis and AOL to a minimum.

3. (S/NF/SK) Summary: Site is surface and structure. Structure seems to have a unique form, (see S3 sketch). Sense of "oriental"; foreign language. People at the site are in the process of a major rearrangement, "like if you were at NSA and realized that to better accomplish your particular mission you would need to completely move all of the equipment from one room into the next, and all the equipment there into the next room...and so on, so that it would be weeks before it was all organized and functioning again". People here are aggravated, frustrated, annoyed and tired; they feel that the routine has been unnecessarily disrupted and they are disgruntled at having to do extra work (which they are not normally required to do). [Note: Source #003, by his nature, probably has good "empathetic contact" with these people]. New equipment and crates are present within the structure, old equipment outside. There is a large, flat surface that is part of the site. It has to be open and spacious (for some reason), (AOL-"like a gunnery range or nuke testing range"). There is a vehicle (possible tracked) moving around the area. The purpose of the area is for trials or testing. The area is rocky/gravelly, brown, gritty, warm and windy. It is smoothed out (as if leveled or graded) periodically. [Note: Strong source AI of "exposure" connected with being "fixed" (movement exercise) at the center of this area; (AOL-"biochemical or

DECLASSIFY : OADR

~~SECRET~~/NOFORN-SKEET CHANNEL ONLY

nuclear tests"]]. The "test" (introduced word) involves the following concepts: Three vehicles--assessing, protective, observing, carefully controlled; The activity must be observed from a distance. Just prior to it, a few people and vehicles are present in the area, but they must then depart. There is a sharp vibration, a puffy cloud (translucent green) with associated ammonia-like smells (AI-"feels like my eyes are watering" and "stingy nose"). The activity produces a (possibly) circular, black, crumbly patch on the ground. This patch is subject to scrutiny by a group of people who walk around it, pointing, discussing, considering, measuring, examining, recording, analyzing, learning, and adjusting. Towards the center of the activity area are a few proportionately small structures (among them a tower) and objects together which serve to monitor and/or possibly initiate (the activity). (See source sketch of the area, p.14).

4. (S/NF/SK) Feedback: Source was informed that he had acquired what seemed to be the (correct) target.

5 1/2 group + people, pointing, discussing, considering,
heavily, visually analyzing... walking out on
surface. Discussing + examining agreement markings
on ground, overalls created.

5 4 1/2 Sometimes vehicles + people (a few of each) on surface at
times. But when it's time to do whatever is done, there
are kept off the edges of the area, & perhaps protected.
On the surface itself at time of use, well out towards
the middle, is a proper structure + objects that
monitor/initiate the activity.
Few hollows/hills on surface; but nothing significant.

SR →

black craters
marks on
ground.

Site involves a large, solid structure with many angles and a large open, relatively flat area ^{surface} that is leveled/graded periodically & is used for ~~test~~ or trials. There are occasionally people & vehicles on this surface, but when it is about to be used, they are kept off the edges. There are a few relatively small objects/structures well out onto the surface. After the test/trials measurements & analysis occur, with a small group of people discussing nearby marks on the ground that are black & crumbly, & possibly circular.
